Table 1-2 Bobcat-320 camera configurations and general description

General Description and Applications
<p>The Bobcat is a very compact SWIR camera using an InGaAs FPA detector, for imaging in the SWIR (900 to 1700nm) or VisNIR (400 to 1700nm) wavelength range. The Bobcat is available in 2 different resolutions: 320x256 or 640x512.</p> <p>The camera has a CL or GigE output, low noise and dark current, together with low weight, power and size. In addition, various C-mount lenses (SWIR or Visible) are available.</p> <p>The Bobcat-640 can be operated both in high gain and low gain, and ITR and IWR. For the Bobcat-320, only high gain and ITR is available. The Bobcat has also different image processing algorithms implemented onboard: multiple non-uniformity corrections (NUC or TrueNUC), Autogain and Offset Control (AGC), Auto Exposure and Histogram Equalization. Regarding the implemented algorithms, the Bobcat-320 is available in 3 different versions: a basic 100Hz basic version, an advanced 400Hz version, and a gated 400Hz version.</p> <p>As a result the camera is very well suited for various applications, such as night vision, waste sorting, food inspection, in-line quality control, imaging of hot objects (300 to 800°C range), machine vision & process control and failure analysis.</p>
