

Z-LASER replacement for 19mm-lasers

Some customers use lasers with an outer diameter of 19,05mm (3/4 inch) and have all their mountings according to this size.

Since Z-LASER is a German manufacturer who uses the metric system we decided to offer our lasers with a 20mm outer diameter and a M18-thread. Both dimensions are standard in the European market.

If you are looking for a replacement of an existing 19mm-laser but don't want to integrate a new mounting which also means additional costs, Z-LASER has the right solution for you: **AP-M18-19 adapter for M18 thread**

ZM18S3-laser + AP-M18-19

With this solution a replacement won't be any problem!
