Overview

Base Camera Link, 10 μm pixels and resolution up to 4k with proven performance.

Piranha 2 delivers superb performance with a wide selection of resolutions. Base Camera Link with two 8 or 10 bit outputs at 40 MHz deliver 80 MHz throughput, and boosted responsivity means the Piranha 2 needs less light. Our 10 μm models are available in resolutions from 1k to 4k.

The camera is small, light, and uses a single power supply. The compact design is shallow and small. Cabling interfaces are simplified with the Base Camera Link™ high-speed serial standard. The camera is very sensitive, but still provides quieter, more uniform output thanks to CDS (correlated double sampling) and embedded flat-field correction algorithms. Gain and offset are fully programmable for each output channel, and the camera can output test patterns for cable/system troubleshooting. All resolutions provide appropriate, readily-available standard lens options (C mount, F mount, and M72 x 0.75).
